MP1 Closed Circuit Axial Piston Pumps

## Reliable power from a trusted partner

The Danfoss MP1 is the next evolution in closed circuit axial piston pumps. No matter what industry you serve, MP1 pumps offer the performance needed for today's small- to medium-sized equipment — another example of Danfoss Power Solutions' commitment to the mobile hydraulic industry. You can count on us to do business at your speed, delivering what you need, when you need it — to propel you forward. Maximize your return on investment through faster equipment development cycles.

OEMs and distributors alike can benefit from the MP1 pump and achieve increased market share. Above and beyond the proven precision machine control OEM customers will experience, they will also have the opportunity to capture real-time vehicle performance data through Danfoss Telematics Solutions. Distributors can reduce overhead using modular products from a regional source — enabling them to quickly adapt to changing market needs without having to stock a great number of product variations.

Danfoss has a clear vision of the road ahead. In our commitment to the off-highway equipment industry, we will continue to add more options, including pump sizes and complementary products. MP1 will change the way you do business with Danfoss.
