

»SUCCESS CAN BE MEASURED ...«

Our Passion: Control. Measure. Regulate.

OUR LOCATION.

»We stand for individual solutions aligned to customers and for technical know-how of the highest level!«

WE MEASURE OURSELVES BASED ON YOUR REQUIREMENTS.

The company Engler measurement and control technology stands for over 40 years of competency and innovation in the branch-based level, temperature and pressure technology.

Engler distinguishes itself through a consequent solution and requirement-oriented mode of thought. We develop well-engineered products and unconventional solutions in every detail. Custom-made. Customer-specific. Of the best quality. That is the challenge that we place on ourselves. To which we let ourselves measured. Any time.

»We set upon unconventional ideas, personal commitment and close co-operation with our customers. For a perfect result!«

ENGLER HAS TRADITION.

- 1975 With the pioneering spirit, readiness for innovation and farsightedness, Engler has conclusively influenced the level, temperature and pressure measurement technology from the time the company was established by Franz Engler in the year 1973 and it has set technical criteria repeatedly.
- 1985 In the 80's, Engler recognized the requirement for complex measurement systems for the process technology and formed his portfolio accordingly. Flexibility, highest challenges on the quality of the products, problem-oriented transactions and customer-specific solutions – the consequent conversion of these guidelines allowed our company to grow steadily and this resulted in moving into larger production rooms in 1986.
- 1995 With the moving into new office space, Jürgen Engler also joined the company; he laid the foundation stone for further developments and the expansion of the product spectrum. Over and above that, our great and wide-ranging know-how led to the steady increase of customer-specific developments for nearly all the industry branches.
- 2005 The joining of Heinz-Georg Engler into our company marked a further milestone in our history. Under his influence, Engler developed the international market and intensified the contacts with its customers.
- 2007 Engler created an important condition for the expansion and for the successful future of the company, with the extension of the production and business rooms.
- 2015 Engler enlarged 2014 with a new building it's capacities for management and development to continue their steady growth. In addition Engler extended their international distribution network.
- 2025 Engler certified in 2016 their level and temperature measurement devices as well as combined level and temperature measurement devices according to the ATEX-Guidelines of the European Union.

TODAY ALREADY SOLUTIONS FOR TOMORROW.

Our know-how and a fine intuition for future challenges have made us grow steadily from the time of establishment and stabilised our position in the world market.

Today Engler is a full-service provider with world renown. Companies from the most different branches – from automobile to environment – trust us, when it deals with the monitoring of filling levels, temperatures, pressures or the optimised control technology and process technology.

We have resolved to do a great deal in the future. The stabilization of the location "Germany", the further development of our products and new development of our products oriented to the latest stand of technology from the family of Engler are found to be in focus. Our target: Always better products and solutions for you!

WE SET OUR YARDSTICK ALWAYS HIGHER.

You can count on the products from the family of Engler. At any time. Our wide product portfolio with products, which can be combined to the optimum with one another, thanks to our „model kit system“, will convince you.

Our production in Germany will benefit our customers as regards flexibility, reliability and quality. Through a modern production process, we are in a position to offer our customers short and secure delivery time, to ensure a high dimension of quality as well as to implement individual requirements of the customers quickly and efficiently.

- _ TEMPERATURE
- _ LEVEL
- _ PRESSURE
- _ MEASURING TRANSDUCER
- _ INDIVIDUAL PRODUCT SOLUTIONS

Our products for level measurement technology can be set in almost all fluids and offer the option of measuring status of levels with different measurement systems. For an optimum adjustment to your requirements, the products are available with fixations and terminals as well as in different construction forms.

Temperature is the most frequently measured parameter in the process industry. Engler supplies optimum solutions for it for every place of action and for almost all temperature ranges.

Cost-efficient. Economizing space. Efficient. The combined level and temperature measurement technology is convincing with clear advantages and with a large number of input possibilities.

PRODUCTS

OUR YARDSTICK IS TECHNICAL PERFECTION.

Pressure measurement technology

Measuring transducer

Individual product solutions

Our measuring devices for monitoring the pressures are marked with its robust and extremely stable construction form, a high protection class and a simple operation. The pressure control has been designed specially for perfect monitoring in low and high-pressure area and works with absolute reliability.

Engler measuring transducers have control over entrances for level, temperature and pressure as well as over exits for current and voltage.

Engler develops customer-specific product solutions in the process technology. Our know-how of many years guarantees optimum solutions, coordinated to the respective case of application and as per the wish of the customer. We implement even product solutions for other physical sizes such as for example, humidity.

WE ALLOW OURSELVES TO BE MEASURED THROUGH OUR SERVICES.

Engler offers custom-made products and customer-specific concepts. Due to this, companies from the most diverse branches trust us. Engler stands for short delivery-periods, high quality and close customer relations!

Each branch places its special requirements to our measurement systems. High pressure-temperature compatibility and media compatibility as well as optimum integration in the processes of the company are only some of the advantages of our products to be highlighted.

We possess experience over many years in the conversion of branch-specific solutions for the most diverse industrial branches. Our technical know-how places us in the position of finding the correct solution for you even in case of challenging tasks.
